

# How to Install the App

For the best experience, add this app to your home screen. It will work like a native app—no browser bar, faster loading, and full-screen experience.

---

## iPhone / iPad

**You must use Safari** (this won't work in Chrome or other browsers)

1. Open **Safari**
2. Go to: **[YOUR URL HERE]**
3. Tap the **Share** button (the square with an arrow pointing up, at the bottom of the screen)
4. Scroll down and tap "**Add to Home Screen**"
5. Tap "**Add**" in the top right corner

The app icon will now appear on your home screen.

---

## Android

**Use Chrome, Edge, or Samsung Internet**

1. Open **Chrome**
2. Go to: **[YOUR URL HERE]**
3. Tap the **three-dot menu** (top right corner)
4. Tap "**Add to Home Screen**" or "**Install App**"
5. Tap "**Add**" to confirm

The app icon will now appear on your home screen.

---

## Troubleshooting

### I don't see "Add to Home Screen"

- iPhone: Make sure you're using Safari, not Chrome
- Android: Try scrolling down in the menu—it's sometimes hidden

## **The app still looks like a website**

- Close it completely and reopen from the home screen icon
  - Make sure you didn't open it from your browser bookmarks
-
